

Vedanta

Requirements

- Setup of hub server at Mumbai and additional server installation at various location
- The domino based mail infrastructure would have a single mail domain (@vedanta.co.in) with a standard mail infrastructure across the Vedanta Group and a common address book.
- HUB and the SMTP server's installation and configuration at TATA IDC Mumbai.
- Clustering of two Domino servers.
- Sametime server and client setup, so users chat with colleagues across the domain irrespective of location

Solution

Single mail domain (@vedanta.co.in) with a standard mail infrastructure across the Vedanta Group and a common address book. The domino HUB server will be in a clustered environment. All the domino servers will further be configured into a single Notes Named Network (NNN) that will ensure instant message delivery to users within the group. Virus scanning, content and spam filtering for all incoming mails. Domino servers will also be configured to send internet (SMTP) mails locally through a local SMTP server. Sametime server and client Installation and configuration for online chatting and meeting.

Concerns

The existing mail infrastructure at Vedanta Resources group was alienated with 3 different mail domains.

Various clients are configured at each location to send and receive mails. Respective company's administrator makes use of different nomenclatures and naming conventions for administration of mail infrastructure at each location.

Challenges

- Installation and configuration of Cluster server.
- Synchronization between clustered servers.
- Replication between hub and Additional server at various locations.
- Mail routing at among various locations.
- Testing of Incoming and outgoing mail through SMTP server.

End Results

Successfully completed the project with due planning and documentation on given time schedule with sign off and appreciation letter.
